- Medical choice is a **fundamental human right**.
- Vaccine manufacturers have **no liability** for vaccine injuries and no incentive to come up with safer vaccines. \$4 BILLION has been paid out to those severely injured by vaccines.
- **Aluminum**, a known **neurotoxin**, is in most vaccines. It does damage even in tiny amounts.
- **Formaldehyde** is an industrial **pesticide** and known **carcinogen**. It is used in vaccines and is not safe for human injection.
- Vaccines have never been studied long term or for **safety** in combination, yet 6-9 doses are given per doctor visit. The US gives more vaccines than any other developed country.

When there is a **RISK**,
there must be a **CHOICE**.

**In 1986, Pharmaceutical manufacturers producing vaccines were freed from ALL liability resulting from vaccine injury or death by the Childhood Vaccine Injury Act.*

With this, vaccines became HIGHLY profitable. There are 271 vaccines in development and mandatory vaccine laws for children — and ADULTS — being pushed in most states.

The US gives 2-3x more vaccines to children than most developed countries, yet we have some of the highest rates of childhood issues that are NOT seen in other countries. Things like asthma, childhood diabetes, food allergies, childhood leukemia, developmental delays, tics, ADHD, autism, lupus, arthritis, eczema, epilepsy, Alzheimers, brain damage, etc... **It's NOT a coincidence.**

Vaccines contain toxic chemicals that do NOT belong in our bodies, such as aluminum (known to cause brain and developmental damage even in small doses) and formaldehyde (known to cause cancer in humans).
